 **30 years experience of pumps and applications**

 **3 month warranty on all pump repairs**

 **Emergency services available**

 **We specialise in Booster Sets, Pressurisation units & RPZ Valves. We are accredited RPZ tested & WRAS listed.**

Repair OR Replace? *A Guide To Help You Decide*

REPAIR

- Usually cheaper than replacement, but for very small pumps a new pump would be more cost effective
- Would avoid the risk of modifications to pipework leading to extra costs and downtime
- No electrical contactor or overload changes needed on repaired pumps
- If we repair your existing pump you can be certain your system flow rate and pressure will remain unchanged, whereas a replacement may not always provide an exact duty match

REPLACEMENT

- The best option on pumps with badly corroded components
- May be a requirement if the full plant room is being refurbished
- Old fixed speed units can be replaced with variable speed units if required
- Sometimes necessary if a higher flow rate or pressure is required
- Very small pumps are cheaper to replace than repair
